

TBS Showcases Biometrics Innovations at IFSEC Global 2015

LONDON. U.K., June 15, 2015 (ExCEL, London Stand D1650) – TBS – Touchless Biometric Systems, Swiss manufacturer and biometric solution provider, today announced it will showcase its biometrics innovations at this week's IFSEC International 2015 in London June 16-18 2015.

TBS will present its extensive portfolio and solutions at Stand D1650. Top demonstrations include:

- **3D Face:** TBS will feature a pre-release of its new 3D Face terminal expected to be launched end of 2015. It comes with a touch screen, card reader and extensive configuration options – all embedded in the powerful TBS biometric infrastructure.
- **Multispectral Terminal:** TBS will conduct demonstrations of a prototype terminal. The innovation will feature Genuine HID Technology™, including a card reader and a biometric fingerprint module with outstanding recognition performance and liveness detection. Both HID Global solutions are embedded in the TBS-Terminal line and the TBS web-based Management System.
- **Small and medium enterprise solutions:** The new Micro- and Mini-Servers to be launched at IFSEC will make the installation of a TBS solution a plug & play experience.

Last but not least, the renowned portfolio of 3D and 2D finger scanning technology will be demonstrated in combination with **TBS Video** and **TBS Anti-tailgating** and with various new features.
