Axis showcases Perimeter Defender at Counter Terror Expo to secure Europe's critical infrastructure

New video analytics based solution is designed to reinforce physical access control in demanding and large-scale installations

Axis Communications, the market leader in network video, is demonstrating the newly launched [AXIS Perimeter Defender](#), a solution for large-scale perimeter protection, at Security and Counter Terror Expo 2016 in Olympia, London. The new system, which recently won the Video Analytics award at ISC West in Las Vegas, is a high-end video analytics application for intrusion detection for the enterprise market. The launch is enabling Axis' partners to deliver a scalable and flexible perimeter defence solution using Axis thermal cameras and optical pan, tilt, zoom (PTZ) cameras, AXIS Perimeter Defender and Axis network horn speakers.

The team will be showcasing the new technology on stand E45 at Security and Counter Terror Expo 2016, which is being held on 19th – 20th April. Axis experts will be on hand to guide delegates through the new technology, as well as highlight Axis' innovative approach to the Internet of Security Things, which recognises that today's security solutions have a much higher demand placed upon them in terms of openness and interoperability.

Designed for easy installation, configuration and management, AXIS Perimeter Defender uses edge-based video analytics for maximum accuracy, efficiency and scalability. The application supports multiple detection scenarios including several types of intrusion detection and loitering. It specifically meets the needs of high-security perimeter protection scenarios such as power plants, chemical plants and demanding installations where there is a need to reinforce the physical access control system with reliable intrusion detection.

“Scalability is a key challenge in high-security scenarios as a perimeter may require anywhere from 10 to 100 cameras,” states Peter Friberg, Director Solution Management at Axis Communications. “By performing analytics at the edge, in the cameras themselves, AXIS Perimeter Defender does not depend on a central server to process the video footage. This makes the solution highly scalable, as there is no need for system redesign or expensive hardware replacements each time a new camera is added to the network.”

“This year at Security and Counter Terror Expo, we're thrilled to demonstrate our leading perimeter protection solution which brings i-LIDS certified intrusion detection analytics to the edge,” states Daren Lang, Business Development Manager at Axis Communications. “Axis has a proven track record in helping secure many critical infrastructure sites across a variety of market segments. Security and Counter Terror Expo presents the perfect platform to showcase innovation, including Axis' Perimeter Defender and other new products such as those addressing the need for explosion-proof specifications, to the market.”

AXIS Perimeter Defender has been certified for sterile zone monitoring applications by [i-LIDS](#)[®], the UK government's benchmark for Video Analytics (VA) systems developed in partnership with the Centre for the Protection of National Infrastructure.

To learn more, Axis experts will be available on stand E45 at Security and Counter Terror Expo 2016 to discuss its approach to physical access control and showcase AXIS Perimeter Defender. Discover the technology here: <http://www.axis.com/press-center/press-release/4267>

About Axis Communications

Axis offers intelligent security solutions that enable a smarter, safer world. As the global market leader in network video, Axis is driving the industry by continually launching innovative network products based on an open platform - delivering high value to its customers through a global partner network. Axis has long-term relationships with partners and provides them with knowledge and ground-breaking network products in existing and new markets.

Axis has more than 2,100 dedicated employees in more than 40 countries around the world, supported by a global network of over 80,000 partners. Founded in 1984, Axis is a Sweden-based company listed on NASDAQ Stockholm under the ticker AXIS. For more information about Axis, please visit our website www.axis.com.
