

PASSIFIRE

PASSIFIRE - the London Fire Solutions bespoke app has been developed to provide a simple, easy-to-use process for documenting, tracking and maintaining fire stopping and fire protection systems. It's accessible to our clients on our Repairs & Maintenance contracts and is aimed at providing them with their own record of fire stopping evidence and surveys. This is how it works;

FIRE DOOR SURVEY

- Full individual door survey completed by trained surveyors using **PASSIFIRE app**
- Photos of any door issues captured for complete transparency
- App generates instant fire door PDF reports which the client can access
- Recommended repairs and itemised costings recorded
- Unique barcode is attached to each door

REPAIRS

- **PASSIFIRE app** generates a work sheet for the LFS operative of works agreed with client
- LFS Operative attends client site and validates door by scanning barcode
- All repairs are undertaken using Approved Repair Techniques
- Record of all works with photos are captured on **PASSIFIRE** to maintain a full history on each door
- The doorset is certificated under the BM TRADA Q-Mark Fire Door Maintenance Scheme

MAINTENANCE

- **PASSIFIRE app** is available to client on Android & iOS
- Door with a barcode can be scanned at any time.
 - Alternatively, doors can be searched via floor, door number or name.
- Full history of the door will be viewable, including status of when door previously surveyed and repair information
- Reminder one month prior to maintenance day, to ensure doors are compliant
