IRONYUN

IronYun AI NVR® AI Video Analytics System is the industry's first artificial intelligence solution designed for video surveillance with a simple and easy-to-use user interface. Based on cutting-edge artificial intelligence and deep learning technology, this built-in, pre-trained analytics of software and hardware is capable of fast, efficient identification and search of video objects.

IronYun AI NVR® includes multiple video surveillance solutions. All functions support live stream and batch mode processing, real-time alerts and GDPR-friendly privacy protection when desired. AI NVR® overcomes the challenges of many complex environments and is fully integrated with AI video analytics features for various markets, including perimeter protection of businesses, access controls for campuses and airports, traffic management by law enforcement, and business intelligence for shopping centers.
