

Expansion Joint Systems

Quick Reference Guide

JointMaster[®] Advantage.

At JointMaster[®] our products allow for the natural shifting and movement of buildings. Our Expansion Joint Systems are engineered to handle unique conditions. We realize every building has different needs, so we have a team of experts on hand to help with your project-specific conditions.

When you create the design for your building you create something unique, so why trust just anyone to make your design come to life? Our JointMaster experts obsess about your building and the people who use it and go to extreme lengths to fortify buildings in their stand against the elements. Whether it be unique building conditions, custom applications or installation training, our 'joint-masters' will help your team win big on your next project.

Here are a few helpful things to keep in mind while you get started:

What is the Nominal Joint size?

What amount of movement is specified?

What are the Loading requirements?

What are the joint's applications and location on the project?

What is the space's function and adjacent finishes?

Is fire-resistance or moisture control a requirement?

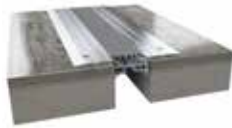

Thermal Systems

Floor Systems

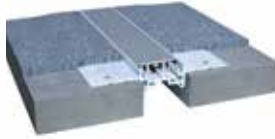

101 Series - Recessed Mount
