SYMMETRY™ RETROFIT SOLUTIONS

RETROFIT OVERVIEW

AMAG's history of providing scalable and backward compatible security management solutions ensures an investment in a Symmetry System is always protected through its open architecture platform. Access control, intrusion and video management solutions continuously evolve and change over the years. If you have an access control or security management system and are facing one of these issues:

- Discontinuance of product due to ageing scenario or company closure

- Antiquated and doesn't meet your needs any longer

- Expansion limitations deny you the growth you need

- Facing expensive upgrade of older hardware to current technology

AMAG HAS A SOLUTION FOR YOU!

If your product is aging and your older system limits the growth you need, you may want a retrofit solution, AMAG's Symmetry Security Management System is the answer. Protect your existing hardware investment when you install Symmetry access control software. Regardless of the current product you have installed, you can upgrade your aging or discontinued system quickly, easily and affordably with Symmetry. Reuse the same cards, readers, and wiring infrastructure, saving installation time and expense, and minimizing downtime.

Symmetry ensures your retrofit to an upgraded SMS is painless:

- Feature set includes integrated access control, IP video and intrusion detection functionality.

- AMAG Pro-Services can frequently provide the ability to capture alarms from the existing system into Symmetry, allowing side-by-side smooth transition while managing a single interface. No need to change lagacy resistors or device wiring in many cases.

- AMAG assists with migration planning and data conversion to ensure a successful transition.

### AMAG provides cost effective solutions:

- Purpose-built hardware features designed to make the retrofit fast and effortless.

- The cost to install and maintain a PACS from AMAG is a fraction compared to other options.

- AMAG builds backward compatibility into our solutions so there is no requirement to upgrade hardware while staying current with software.

- AMAG develops long-term partnerships with our customers.

VISUALIZER ENCODERS:
UPGRADE AGING VIDEO TECHNOLOGY

Keeping your security system up to date ensures you have the latest hardware and software securing your premises, people and assets. AMAG's Symmetry Visualizer Encoders digitize analog video signals and send digital images directly over an IP network, such as a LAN, intranet or Internet. It essentially converts an analog video system into a network video system and enables users to view live images using a Web browser or video management software on any local or remote computer on a network. Visualizer is available in 1, 4, up to 12 and up to 40 channels, and comes standard with advanced motion detection. Video analytics are available on all models, allowing existing cameras to act as sensors to detect threats and increase efficiency. Visualizer Encoders work with Symmetry software as well as other VMS platforms such as Milestone, Salient and OnSSI.

AMAG Technology's scope of scalable Symmetry Security Management Systems delivers the most intelligent security integration platform offered on the market. With software based on .NET architecture from Microsoft© technology, the Symmetry Product Portfolio expands with an organization as needs change. Unlike other security management systems, Symmetry comes standard with Identity Management and Visitor Management functionality, and seamlessly integrates with Symmetry IDS and IP video management modules to provide a complete cohesive solution. A Homeland version of Symmetry is also available for organizations needing to comply with government requirements. AMAG's easy to use Symmetry SMS is the trusted choice for numerous applications in every major industry.

SR CONTROLLERS:
RETROFIT SOLUTIONS FOR AGING SECURITY SYSTEMS

For replacement of aging "backplane architecture" products using F/2F reader communications, the Symmetry Retrofit Series access control panels utilize a pluggable backplane architecture that fits into a compact enclosure. Its high density, form factor design is fully interoperable with Symmetry's multiNODE M2150 and EN series controllers. The Symmetry SR series, with built in database and support for up to 16 card readers, easily expands using plug-in door controllers and I/O modules, allowing a retrofit for any size system.

M2150 SERIES CONTROLLERS:
REPLACEMENT CONTROLLERS FOR INTRUSION DETECTION SOLUTIONS

M2150 Controllers offer the ability to capture alarms from an MDI system into Symmetry system allowing side-by-side smooth transition while managing a single interface inside the Symmetry Software. There is no need to change EOL resistors or device wiring as the M2150 panels support MDI input loops and end-of-line resistor values. As with our other retrofit solutions AMAG offers Professional Services to assist
