Conik® Access Wall

Conik® Access Wall is a biometric device for access control. The device is designed for surface installation on walls, providing quick and easy access of users to different rooms or areas through fingerprint identification.

Thanks to its attractive design Conik® Access Wall is applicable to any interior. The integrated sound and light signaling makes it easier for consumers to scan a fingerprint.

Conik® Access Wall is connected via DriverControl® to the Biodit Management Software with RS485 interface with a maximum distance of 1 km.
