

Meridian & Elogbooks Integration

Meridian, from William Martin Compliance, is a cloud-based risk management system that provides complete visibility of all compliance risks for an organisation across their premises.

Elogbooks is a combined CAFM and service desk solution that gives total visibility of your supply chain, aids compliance and ensures services are delivered to a high standard.

WHAT DOES THE INTEGRATION INVOLVE?

Integrating these two systems ensures data can be shared seamlessly, allowing more effective management, monitoring and control of risk management and compliance. It allows actions that are captured in Meridian, through the risk assessment and auditing process, to be shared to Elogbooks. Through the CAFM system in Elogbooks, these actions can be addressed, remedied and closed quickly and efficiently. All data is shared between the two systems, creating a harmonised and accurate process.

WHY IS THIS DIFFERENT?

Following the acquisition of Elogbooks in June 2020, it now joins Meridian as one of the innovative products within the Marlowe Group. This has allowed these two systems to come together to create a genuinely ground-breaking end-to-end action management solution, an exciting first for the industry.

WHAT ARE THE BENEFITS FOR CUSTOMERS?

Bringing these two systems together has enormous benefits for customers, delivering enhanced reassurance that all risks are captured and addressed as quickly as possible, especially as only approved contractors are on the system. It also provides:

- End-to-end identification and remediation of any actions
- A simplification of the processes and systems involved
- A real-time understanding of action management
- Quicker and clearer action management
- An improved understanding of contractor performance through the job lifecycle
- A prioritisation of jobs dependent on risk levels

TESTIMONIAL

From our perspective, the Elogbooks and Meridian platform working together is a necessity in ensuring that the FMs and service partners can seamlessly approve and manage works and/or actions from the H&S platform (Meridian) to the CAFM / supply chain management tool (Elogbooks) without having to log into multiple platforms. This not only aids better compliance but saves time on behalf of the FMs and other stakeholders.
