Product of the Year - Storage

introduction

As matter experts in smart workplaces, we have seen that integrating smart technologies is imperative to creating a future ready workspace that enhances the employee experience.

Many companies are adapting to an agile or allowing a hybrid working model, meaning a greater number of people are now working remotely and from home, visiting the office maybe just 2/3 days a week. As a result of this workplace shift, anything in the workplace needs to be multi-use and multi-functional, yet safe and sanitary, to ensure businesses are getting a return on investment from workplace facilities that may not be used as frequently.

The benefits that smart technology can offer any company are limitless, and is revolutionising the way companies manage their organisations. Our Simplicity smart locker solution plays a fundamental role in shaping a smart working environment that supports agile and hybrid working and gives business the flexibility and visibility needed in our post pandemic working world.

agile working

creating a better normal

transforming the workplace through agile working

Agile working involves the conscious break down of traditional limitations in the workplace. Dedicated desks and rigid office designs are replaced with innovative and adaptable approaches to workspaces and working practises. Agile working calls for more freedom around how, when and where we work. This modern working style incorporates collaboration with smart technology.

70

% of companies are predicted to transition to an agile way of working by 2021, as a result of COVID-19,* according to Growth Business Magazine

the smart agile office

What are the benefits of agile working?

It has never been easier for businesses to adopt an agile work culture and can benefit both your company and employees.

modular storage

a flexible and re-configurable system that can adapt to changing business needs

cost saving

adapting workspaces to make your building more efficient

layout and design

increased flexible and collaborative work areas

improve staff well-being

enhance the employee experience

increase productivity

agile working has been proven to improve output

return on investment

storage facilities that are multi-use and multi-functional

the smart revolution

What is a
Simplicity
smart locker?

When traditional lockers meet the latest technology, reporting capabilities, and bespoke designs that are modular and versatile, a Simplicity smart locker is born.

Our smart lockers provide businesses with a practical storage solution, the integrated software (which is what makes our lockers smart) also offer a whole host of benefits to users and management teams alike.

smart insights

Big on data, Simplicity smart lockers can help you transform your business through our integrated technology.

utilisation

see how often your lockers are being used, to what capacity and in what location to ensure your smart lockers are being used efficiently

data

analyse your building, workspaces, and employee footfall with the integrated reporting function to help make improvements to your corporate real-estate and workplace design

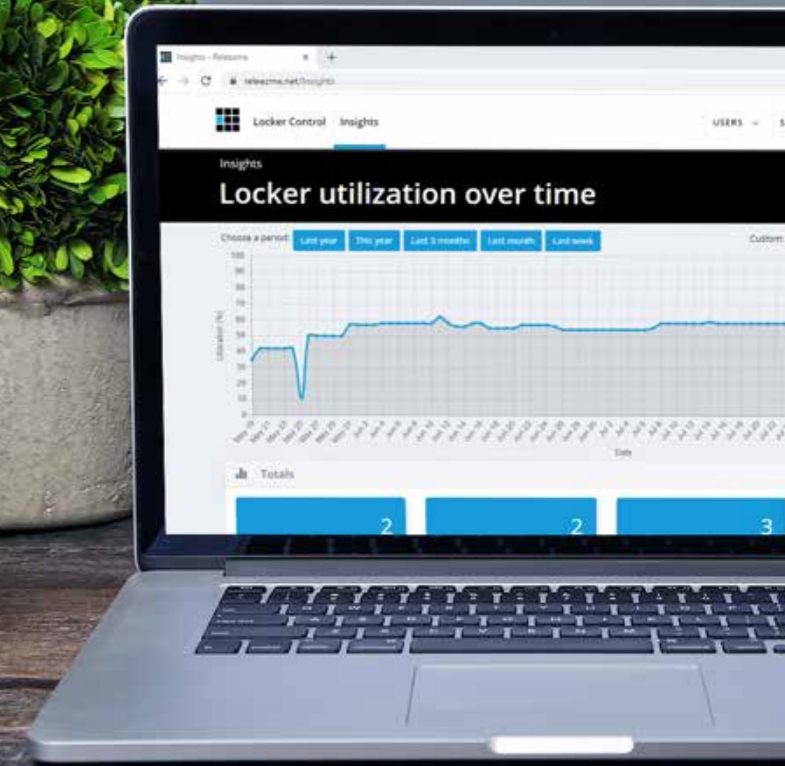

reports

generate reports to support your facilities management strategy

time

with no geographical boundaries and no more keys, smart lockers can be managed across a multitude of locations and floors from one central location

safer with simplicity

Following the pandemic, and as people start to make their way back to the office, businesses are continuing to adapt to a hybrid working model, meaning more employees are working remotely and from home, visiting the office maybe just two to three days a week. Lockers are becoming multi-use and multi-functional and are often being used just one day at a time. Therefore, the need for a safe and sanitary solution to ensure staff, visitors and clients are kept safe whilst using communal storage facilities is still very much present.

Our 'Safer with Simplicity' features and functions that were developed as a result of COVID-19 can help:

contactless lockers

access your lockers using an employee/building card or via the free smart phone app

remote management

assign, open and release lockers remotely from a single management hub

social distancing

allocate lockers 2 metres apart and proportionally throughout the building

'track and trace'

record the time, date, locker number, locker location and locker user to comply with new government guidelines

cleaning

block lockers for cleaning and notify your house-keeping team with an automatic email when lockers have been used

finishes

we can construct your lockers using materials with antibacterial properties

pick-up lockers

Parcels, letters, laptops, or mobile phones; our collection lockers will provide you with a safe, reliable, and trackable smart solution that will automate your internal mail and company asset management system.

How our Pick-up lockers work:

Pick-Up lockers use the MYPUP software .

When an item is delivered it will be placed in an automated locker at the pick-up point.

The software can also send delivery reminders, to make sure the item is collected.

Once the locker has been closed, the recipient of the item will then receive a message either by SMS or email to say their item is ready to be collected, along with a unique code to provide access.

simply green

Your Workspace are dedicated to minimising the impact our business has on the planet and are passionate about making a real difference in the fight to combat climate change.

Our current range of products are already manufactured using sustainably sourced and environmentally friendly materials. Simplicity also operates at a lower locker to user ratio, which means less materials are needed during the manufacturing process. Always striving to do better, Your Workspace wanted to go one step further.

We are now offering our clients the option to use an even more eco-conscious alternative to our sustainably sourced MFC, materials that have an even lower impact on the planet. This new range includes materials such as recycled fibreglass, eco-boards made from straw and hay, and virgin timber that uses potato starch as an alternative to traditional adhesives.

Get in touch with our team to find out more about 'Simply Green', and help us save the planet one product at a time.
